SMILEFAST STYLOSO: PREDICTABLE LAB MADE COMPOSITE VENEERS WITH MINIMAL PREP

Using resin composite to place direct veneers onto teeth has revolutionised the way we deliver smile makeovers in an efficient and predictable way. However, there are times when placing resin direct to teeth will not achieve the desired results either we or our patients are looking for. In certain situations, using additive only direct resin is not the ideal treatment option, and lab-made veneers are the preferred alternative. This has historically meant that the teeth require extensive preparation, and the procedure becomes time-consuming and costly to both us and our patients.

The SmileFast Styloso project was conceived and developed to offer an alternative to this; to be able to provide our patients a lab-made veneer option which didn't require the same level of tooth preparation as ceramic veneers, nor the extended time or the increased costs involved – yet still provide a predictable and beautiful smile.

In addition to experiencing this new protocol, you will learn essential fundamentals to perfect veneers; being the lab communication and planning, the tooth preparation sequence, and finally the cementation protocol. A grounded understanding of these three fundamentals will empower you to deliver predictable high-end restorations with confidence.

DATE: FRIDAY 28TH JUNE 2024
GREAT FOSTERS HOTEL, SURREY, TW20 9UR

BAAD MASTERCLASS SPECIAL

SMILEFAST STYLOSO: PREDICTABLE LAB MADE COMPOSITE VENEERS WITH MINIMAL PREP

08:30 – 09:00 REGISTRATION

09:00–11:00 DR WALTER DEVOTO

SmileFast Styloso: Predictable lab made composite veneers with minimal prep

11:00–11:30 COFFEE BREAK

**11:30–12:00 DR JURGITA SYBAITE:
ANTERIOR RESTORATIONS: DIRECT & INDIRECT STRATEGIES**

In this presentation, two comprehensive clinical cases of anterior restorations will be demonstrated: one direct and one indirect. Each case will cover the clinical presentation, treatment planning rationale, and execution steps. Emphasis will be placed on the presenter's workflow and decision-making process, showcasing the skill involved in both techniques. Dr Jurgita will delve into the choice of materials and their suitability for each case. Detailed clinical steps will be outlined, from preparation to final touches, while discussing the strengths and weaknesses of both approaches. Attendees will gain a clear understanding of how Jurgita manages aesthetic cases with direct and indirect techniques.

(Presentation for Full Membership)

**12:00–12:30 DR TARIQ BASHIR:
MINIMAL INTERVENTION, MAXIMUM RESULTS – NO DEEP-FRIED DENTISTRY HERE**

In this presentation Dr Tariq Bashir will discuss a selection of cases from his daily practice. In each of these cases, treatment intervention has been kept to a minimum but at the same achieving the best possible result. Cases discussed include a complex class 4 fractured central restored with layered composite as well as cases involving resin infiltration for young patients affected by white spot lesions. In addition to this, there will be discussion of steps involved in restoration of a highly aesthetic single central crown which involved close communication with the dental technician.

(Presentation for Full Membership)

12:30–13:00 MEMBERSHIP PRESENTATIONS – Q&A

13:00–13:45 LUNCH BREAK

13:45–17:00 HANDS-ON WORKSHOP WITH WALTER DEVOTO & SMILEFAST

17:00 CLOSE
