## RECESSION COVERAGE AROUND TEETH & IMPLANTS: A HANDS-ON MASTERCLASS

Root coverage procedures around teeth are indicated for aesthetic purposes, for reducing sensitivity, and for treating gingival margin inconsistency, and for enhancing keratinized tissue.

Root coverage procedures around implants are required to create a mucosal seal ("transmucosal attachment") to prevent bacteria and bacterial products reaching the bone, thus safeguarding the osteointegration of the implant. Specifically, when the volume of soft tissue is inadequate, or there is no keratinized tissue remaining, the provision of additional soft tissue is often required to develop an adequate transmucosal tunnel around dental implants for optimal volume and attachment.

This masterclass presentation will discuss the critical factors and the step by step surgical protocols associated with correcting gingival recessions around teeth and implants and will show procedures to correct these deficiencies with soft tissue manoeuvres and connective tissue grafts for enhanced outcomes on a predictable basis.

### **Educational Aims and Objectives :**

- To be familiar with the anatomical landmarks and compartments such as the mucogingival junction and attached and non-attached gingivae.
- To appreciate the rationale of biological width and the formation of a transmucosal tunnel around dental implants and the strategies required to enhance the soft tissue tunnel.
- To understand how to harvest soft tissue grafts and their application on tooth roots and implants to improve the formation of keratinized and attached soft tissue.

## FULL MEMBERSHIP PRESENTATIONS

### THE CONTACT-POINT BRIDGE – INNOVATIVE AND MINIMALLY INVASIVE TOOTH REPLACEMENT

RESTORE SMILES WITH PRECISION, NO DAMAGE, JUST SMART ADHESIVE DENTISTRY.

#### Dr Marco Gresnigt

Marco Gresnigt graduated cum laude in 2005 and in 2012 he received his PhD (on laminate veneers) from the University of Groningen. He is currently associate professor in restorative dentistry, conducts practice based research in the field of restorative/adhesive dentistry and teaches aesthetic and reconstructive dentistry at clinic. He has 5 PhD students, 17 master students, 2 internships and publishes in international journals (>65 peer reviewed; h-factor 27) especially in the field of adhesive restorative dentistry. He works at the center for special dental care at the Martini Hospital Groningen where he performs restorative and esthetic treatments using a surgical microscope. He gives keynote lectures and masterclasses (inter)nationally in the field of esthetic and adhesive dentistry ([www.summitdentistry.nl](http://www.summitdentistry.nl)). He has won several awards such as the GC world clinical case award, Smile award, EAED innovation award and numerous scientific awards. He was the president of the international Bio-Emulation group and has a group for innovative restorative dental research [www.summit-research.org](http://www.summit-research.org).

### 3 CASES BY HANS KRISTIAN OGNEDAL

#### Dr Hans Kristian Ognedal

2001: Educated candidatus odontologicae at University of Bergen, Norway

2001-2002: Naval academic officer in dentistry

2002-2006: Associate dentist in Stavanger, Norway

2006-: Principal dentist in Stavanger, Norway

Dr Ognedal has been published in the Journal of the Norwegian Dental Association, Den Norske Tannlegeforenings Tidende.

He has lectured at the Scandinavian Academy of Aesthetic Dentistry and at the Academic Meeting of The Norwegian Dental Association, Landsmøtet for den Norske Tannlegeforening. Dr Ognedal runs a general dental practice focusing on minimal invasive, aesthetic and biomimetic dentistry.

### ANTERIOR AESTHETICS: DIRECT AND INDIRECT TECHNIQUES

A CASE BASED DISCUSSION ON THE DIAGNOSIS, PLANNING AND DECISION MAKING FOR A DIRECT AND INDIRECT APPROACH AND AN EVALUATION OF THE PROCEDURES AND OUTCOMES.

#### Dr Payman Sobhani

Dr Payman Sobhani is the Principal Dentist at Dental Beauty Bromley and Dental Beauty Hampstead, where he works alongside a talented team to provide patient-centred care with a particular focus on aesthetic and restorative dentistry. He has a keen interest in restorative dentistry and is passionate about achieving natural, functional, and confident smiles through thoughtful, detail-oriented treatment planning. Since qualifying from Leeds Dental School in 2012 Payman started his career in Harley Street and has since gained experience and training in a wide range of cosmetic and restorative procedures. Alongside clinical practice, Payman enjoys sharing what he's learned with colleagues and regularly lectures and mentors on topics related to cosmetic and restorative care. He's always keen to learn from others and is honoured to be part of the conversation at this conference among such experienced clinicians who have inspired him along his journey.
